InterviewBit Software Engineering Intern

InterviewBit is an interview preparation site which is immensely popular amongst software engineers (https://www.quora.com/Reviews-of-InterviewBit, https://www.interviewbit.com/testimonials/). Over the past years, InterviewBit has built the brand of being:

- The trusted interview preparation site amongst software developers with high quality content.
- The trusted platform for top tech companies to hire. A lot of companies hire exclusively through InterviewBit.
- The trusted platform to enable life changing job shifts (8x salary jumps).

Leveraging this, we have started **Scaler Academy** (https://www.scaler.com) last year which is a result driven online university to provide students live online classes for computer science education, focused on jobs. We charge students only when they get a job above a salary threshold. In a world where skills matter more than degrees, we strongly believe this model has potential to change undergrad education worldwide.

We already have a stellar team of people who are ex-Facebook and ex-Twitter. Come join us to revolutionize education.

What is Scaler Academy

Scaler Academy is an immersive online university. We teach people things that matter for software engineering jobs (Problem solving, DS / Algo, Web architecture, product building cycle) and the path to become 10x engineers. The course involves no upfront payment and a payment as a percentage of salary when they get a job which pays more than a salary threshold which is personalized from person to person.

The classes happen late night every weekday, with the following format:

● **Hour 1:** Interactive Live lecture on the topic for the day. Focus on learning by examples and minimizing theory.

● **Hour 2:** TA assisted assignment session. Students solve questions based on topic taught with TAs on standby to help with doubts.

● **Hour 3:** Standup sessions in smaller groups where the group and TAs discuss the expected solution and further homework.

What you'll be working on

- We are looking for talented Engineers who enjoy working on creative algorithms, building large scale systems and who thrive in a fast paced fun environment.
- As an engineer you would design business critical systems, write high quality code.
- Should have experience in Object-oriented Design and Service Oriented Architecture.
- You will help us scale our tech to cater to thousands of students.
- You will help us build tech automations and processes to reduce the dependency on operations for the entire course.
- You will ship high quality solutions with a sense of urgency and speed.

Why Scaler Academy

- **Strong team :** 80% of InterviewBit team comes from companies like Facebook, Twitter, Fab etc.
- **High revenue growth :** We are already profitable with good revenues. We will be a unicorn in the next 2 years if we execute well.
- **Great investors:** Our first investor is Sequoia Capital who we have on the cap table for a token investment. Sequoia is one of the best VC firms in the world. (They were one of the first investors in Apple and Google).
- **Great perks :** Free food, fun workspace.
- **One of the best pays in the market:** Coming from a company which has been actively helping companies hire and is aware of the salaries everywhere.

What we are looking for

- Extremely sound in software engineering principles. Great at data structures and problem solving.
- **Good to have:** Understands the principles of high and low level design in detail.
- **Must have:** Passion to learn and take ownership
